

DRV5021-Q1 汽车用、低电压、单极、数字开关霍尔效应传感器

1 特性

- 适用于汽车电子 应用
- 下列性能符合 AEC-Q100 标准：
 - 器件温度等级 0: -40°C 至 150°C 环境温度范围
 - 器件 HBM ESD 分类等级 3A
 - 器件 CDM ESD 分类等级 C6
- 数字单极开关霍尔传感器
- 2.5V 至 5.5V 工作 V_{CC} 范围
- 磁性灵敏度选项 (B_{OP} , B_{RP}):
 - DRV5021A1-Q1: 2.9mT、1.8mT
 - DRV5021A2-Q1: 9.2mT、7.0mT
 - DRV5021A3-Q1: 17.9mT、14.1mT
- 30kHz 高速感应带宽
- 漏极开路输出电流高达 20mA
- 经过优化的低电压架构
- 具有集成迟滞特性, 可增强抗噪能力
- 标准行业封装:
 - 表面贴装 SOT-23

2 应用

- 汽车变速器、车身外壳
- 限位开关
- 一般接近感应
- 刷式直流电机反馈
- 门开关检测
- 阀定位
- 脉冲计数

典型应用电路原理图

3 说明

DRV5021-Q1 是一款低电压数字开关霍尔效应传感器, 适用于高速汽车 应用。该器件由 2.5V 至 5.5V 的电源供电, 可以检测磁通量密度并根据预定义的磁性阈值提供数字输出。

该器件会检测垂直于封装面的磁场。当施加的磁通量密度超过磁运行点 B_{OP} 阈值时, 器件的漏极开路输出将驱动低电压。当磁通量密度降至磁释放点 (B_{RP}) 阈值时, 输出会变为高阻抗。 B_{OP} 和 B_{RP} 的分离所产生的滞后有助于防止输入噪声引起的输出误差。这种配置使得系统设计能够更加稳健地抵抗噪声干扰。

该器件可在 -40°C 至 $+150^{\circ}\text{C}$ 的宽环境温度范围内保持稳定的优异性能。

5 Pin Configuration and Functions

Pin Functions

PIN		TYPE	DESCRIPTION
NAME	DBZ		
GND	3	GND	Ground pin
OUT	2	Output	Hall sensor open-drain output. The open drain requires a pullup resistor.
V _{CC}	1	Power	2.5-V to 5.5-V power supply. Bypass this pin to the GND pin with a 0.1-μF (minimum) ceramic capacitor rated for V _{CC} .

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

	MIN	MAX	UNIT
Power supply voltage (VCC)	−0.3	6.0	V
Output voltage (OUT)	−0.3	6.0	V
Output current (OUT)		30	mA
Magnetic flux density, B _{MAX}		Unlimited	T
Operating junction temperature, T _J	−40	170	°C
Storage temperature, T _{stg}	−65	150	°C

- (1) Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

6.2 ESD Ratings

over operating free-air temperature range (unless otherwise noted)

			VALUE	UNIT
V _(ESD)	Electrostatic discharge	Human body model (HBM), per AEC Q100-002 ⁽¹⁾	±6000	V
		Charged device model (CDM), per AEC Q100-011	±1000	

- (1) AEC Q100-002 indicates that HBM stressing shall be in accordance with the ANSI/ESDA/JEDEC JS-001 specification.

6.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
V _{CC}	Power supply voltage range	2.5	5.5	V
V _O	Output pin voltage	0	5.5	V
I _{OUT}	Output sinking current	0	20	mA
T _A	Operating ambient temperature	–40	150	°C

6.4 Thermal Information

THERMAL METRIC ⁽¹⁾		DRV5021-Q1	UNIT
		SOT-23 (DBZ)	
		3 PINS	
R _{θJA}	Junction-to-ambient thermal resistance	356	°C/W
R _{θJC(top)}	Junction-to-case (top) thermal resistance	128	°C/W
R _{θJB}	Junction-to-board thermal resistance	94	°C/W
Y _{JT}	Junction-to-top characterization parameter	11.4	°C/W
Y _{JB}	Junction-to-board characterization parameter	92	°C/W

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics application report](#).

6.5 Electrical Characteristics

at V_{CC} = 2.5 V to 5.5 V, over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITION	MIN	TYP	MAX	UNIT
I _{CC}	Operating supply current			2.3	2.8	mA
t _{ON}	Power-on time			40	70	μs
t _d	Propagation delay time ⁽¹⁾	B = B _{RP} – 10 mT to B _{OP} + 10 mT in 1 μs		13	25	μs
I _{OZ}	High-impedance output leakage current	5.5 V applied to OUT, while OUT is high-impedance			100	nA
V _{OL}	Low-level output voltage	I _{OUT} = 20 mA		0.15	0.4	V
R _{DS(on)}	Output FET resistance	I _{OUT} = 5 mA, V _{CC} = 3.3 V		8		Ω

(1) See the [Propagation Delay](#) section for more information.

6.6 Magnetic Characteristics

at V_{CC} = 2.5 V to 5.5 V, over operating free-air temperature range (unless otherwise noted)

PARAMETER		TEST CONDITION	MIN	TYP	MAX	UNIT

7 Detailed Description

7.1 Overview

The DRV5021-Q1 device is a spinning-current Hall sensor with a digital output for magnetic-sensing applications. The DRV5021-Q1 can be powered with a supply voltage between 2.5 V and 5.5 V.

The field polarity is defined as follows: a **south pole** near the marked side of the package is a positive magnetic field. A **north pole** near the marked side of the package is a negative magnetic field. The output state depends on the magnetic field perpendicular to the package.

A strong **south pole** near the marked side of the package causes the output to pull low. A weak **south pole**, the absence of a field, or any north pole makes the output high impedance. Hysteresis is included in between the operate point and the release point to prevent toggling near the magnetic threshold.

An external pullup resistor is required on the OUT pin. The OUT pin can be pulled up to V_{CC} , or to a different voltage supply. This feature allows for easier interfacing with controller circuits.

7.2 Functional Block Diagram

7.3 Feature Description

7.3.1 Field Direction Definition

As shown in [Figure 10](#), the DRV5021-Q1 is sensitive to the magnetic field component that is perpendicular to the top of the package.

图 10. Direction of Sensitivity

Feature Description (接下页)

图 11 shows that a positive magnetic field is defined as a **south pole** near the marked side of the package.

图 11. Field Direction Definition

7.3.2 Device Output

If the device is powered on with a magnetic field strength between B_{RP} and B_{OP} , then the device output is indeterminate. If the field strength is greater than B_{OP} , then the output is pulled low. If the field strength is less than B_{RP} , then the output is released.

图 12. Output State

Feature Description (接下页)

7.3.3 Power-On Time

After applying V_{CC} to the DRV5021-Q1, t_{on} must elapse before the OUT pin is valid. In case 1 (图 13) and case 2 (图 14), the output is defined assuming that magnetic field $B_{APPLIED} > B_{OP}$, and $B_{APPLIED} < B_{RP}$, respectively.

图 13. Case 1: Power On When $B > B_{OP}$

图 14. Case 2: Power On When $B < B_{RP}$

Feature Description (接下页)

If the device is powered on with $B_{RP} < B_{APPLIED} < B_{OP}$, then the device output remains in indeterminate state until the magnetic field changes. After the change in magnetic field results in a condition that meets either $B_{OP} < B_{APPLIED}$ or $B_{RP} > B_{APPLIED}$, the output turns to valid state after t_d time elapses. Case 3 (图 15) and case 4 (图 16) show examples of this behavior.

图 15. Case 3: Power On When $B_{RP} < B < B_{OP}$, Followed by $B > B_{OP}$

图 16. Case 4: Power On When $B_{RP} < B < B_{OP}$, Followed by $B < B_{RP}$

Feature Description (接下页)

7.3.4 Hall Element Location

The sensing element inside the device is in the center of both packages when viewed from the top. 图 17 shows the tolerances and side-view dimensions.

图 17. Hall Element Location

Feature Description (接下页)

7.3.5 Propagation Delay

The DRV5021-Q1 samples the Hall element at a nominal sampling period of 16.67 μs to detect the presence of a magnetic north or south pole. At each sampling point, the device takes the average of the current sampled value and immediately preceding sampled value of the magnetic field. If this average value crosses the B_{OP} or B_{RP} threshold, the device output changes according to the transfer function.

图 18 shows the DRV5021-Q1 propagation delay analysis in the proximity of a magnetic south pole. The Hall element of the DRV5021-Q1 experiences an increasing magnetic field as the magnetic south pole approaches near the device. At time t_2 , the average magnetic field is $(B_2 + B_1) / 2$, which is less than the B_{OP} threshold of the device. At time t_3 , the actual magnetic field has crossed the B_{OP} threshold. However, the average $(B_3 + B_2) / 2$ is still less than the B_{OP} threshold. Thus, the device waits for next sample time, t_4 , to start the output transition through the analog signal chain. The propagation delay, t_d , is measured as the delay from the time the magnetic field crosses the B_{OP} threshold to the time output transitions.

图 18. Propagation Delay

Feature Description (接下页)

7.3.6 Output Stage

The DRV5021-Q1 output stage uses an open-drain NMOS transistor that is rated to sink up to 20 mA of current. For proper operation, calculate the value of pullup resistor R1 using 公式 1.

$$\frac{V_{\text{ref max}}}{20 \text{ mA}} \leq R1 \leq \frac{V_{\text{ref min}}}{100 \mu\text{A}} \quad (1)$$

The size of R1 is a tradeoff between the OUT rise time and the current when OUT is pulled low. A lower current is generally better; however, faster transitions and bandwidth require a smaller resistor for faster switching.

In addition, the value of R1 must be > 500 Ω in order to make sure that the output driver can pull the OUT pin close to GND.

注

V_{ref} is not restricted to V_{CC} . The allowable voltage range of this pin is specified in the [Recommended Operating Conditions](#).

图 19. Open-Drain Output

Select a value for C2 based on the system bandwidth specifications shown in 公式 2.

$$2 \times f_{\text{BW}} \text{ (Hz)} < \frac{1}{2\pi \times R1 \times C2} \quad (2)$$

Most applications do not require this C2 filtering capacitor.

7.4 Device Functional Modes

The DRV5021-Q1 device is active only when V_{CC} is between 2.5 V and 5.5 V.

8 Application and Implementation

注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

8.1 Application Information

The DRV5021-Q1 device is used in magnetic-field sensing applications.

8.2 Typical Applications

8.2.1 Proximity Sensing Circuit

图 20. Proximity Sensing Circuit

8.2.1.1 Design Requirements

For this design example, use the parameters listed in 表 1 as the input parameters.

表 1. Design Parameters

DESIGN PARAMETER	REFERENCE	EXAMPLE VALUE
Supply voltage	V_{CC}	3.2 V to 3.4 V
System bandwidth	f_{BW}	10 kHz

8.2.1.2 Detailed Design Procedure

表 2 shows the external components needed to create this design example.

表 2. External Components

COMPONENT	CONNECTED BETWEEN		RECOMMENDED
C1	V_{CC}	GND	A 0.1-μF ceramic capacitor rated for V_{CC}
C2	OUT	GND	Optional: Place a ceramic capacitor to GND
R1	OUT	$V_{CC}^{(1)}$	Requires a pullup resistor

(1) Pullup resistor may be connected to a voltage source other than V_{CC} ; see the [Recommended Operating Conditions](#) for the valid range of the output pin voltage.

8.2.1.2.1 Configuration Example

In a 3.3-V system, $3.2\text{ V} \leq V_{\text{ref}} \leq 3.4\text{ V}$. Use 公式 3 to calculate the allowable range for R1.

$$\frac{V_{\text{ref max}}}{20\text{ mA}} \leq R1 \leq \frac{V_{\text{ref min}}}{100\text{ }\mu\text{A}} \quad (3)$$

For this design example, use 公式 4 to calculate the allowable range of R1.

$$\frac{3.4\text{ V}}{20\text{ mA}} \leq R1 \leq \frac{3.2\text{ V}}{100\text{ }\mu\text{A}} \quad (4)$$

Therefore:

$$170\text{ }\Omega \leq R1 \leq 32\text{ k}\Omega \quad (5)$$

After finding the allowable range of R1 (公式 5), select a value between 500 Ω and 32 k Ω for R1.

Assuming a system bandwidth of 10 kHz, use 公式 6 to calculate the value of C2.

$$2 \times f_{\text{BW}} (\text{Hz}) < \frac{1}{2\pi \times R1 \times C2} \quad (6)$$

For this design example, use 公式 7 to calculate the value of C2.

$$2 \times 10\text{ kHz} < \frac{1}{2\pi \times R1 \times C2} \quad (7)$$

An R1 value of 10 k Ω and a C2 value less than 820 pF satisfy the requirement for a 10-kHz system bandwidth.

For R1 = 10 k Ω and C2 = 680 pF, the corner frequency for the low-pass filter is 23.4 kHz.

8.2.1.3 Application Curves

8.2.2 Alternative Two-Wire Application

For systems that require a minimal wire count, connect the device output to V_{CC} through a resistor, and sense the total supplied current near the controller. Use a shunt resistor or other circuitry to sense the current.

图 24. 2-Wire Application

8.2.2.1 Design Requirements

表 3 lists the related design parameters.

表 3. Design Parameters

DESIGN PARAMETER	REFERENCE	EXAMPLE VALUE
Supply voltage	V_{CC}	5 V
OUT resistor	R1	1 k Ω
Bypass capacitor	C1	0.1 μ F
Current when $B < B_{RP}$	$I_{RELEASE}$	About 2.3 mA
Current when $B > B_{OP}$	$I_{OPERATE}$	About 7.3 mA

8.2.2.2 Detailed Design Procedure

When the open-drain output of the device is high-impedance, current through the path equals the I_{CC} of the device (approximately 2.3 mA).

When the output pulls low, a parallel current path is added, equal to $V_{CC} / (R1 + r_{DS(on)})$. Using 5 V and 1 k Ω , the parallel current is approximately 5 mA, making the total current approximately 7.3 mA.

Local bypass capacitor C1 must be at least 0.1 μ F. Use a larger value capacitor if there is high inductance in the power line interconnect.

9 Power Supply Recommendations

The DRV5021-Q1 device is designed to operate from an input voltage supply (VM) range between 2.5 V and 5.5 V. A 0.1- μ F (minimum) ceramic capacitor rated for V_{CC} must be placed as close to the DRV5021-Q1 device as possible.

10 Layout

10.1 Layout Guidelines

Place the bypass capacitor near the DRV5021-Q1 device for efficient power delivery with minimal inductance. Place the external pullup resistor near the microcontroller input to provide the most stable voltage at the input. Alternatively, an integrated pullup resistor within the GPIO of the microcontroller can be used.

Generally, PCB copper planes underneath the DRV5021-Q1 have no effect on magnetic flux, and do not interfere with device performance because copper is not a ferromagnetic material. However, If nearby system components contain iron or nickel, they may redirect magnetic flux in unpredictable ways.

10.2 Layout Example

⁽¹⁾ **Status:** For more details on status, see our [product life cycle](#).

⁽²⁾ **Material type:** When designated, preproduction parts are prototypes/experimental devices, and are not yet approved or released for full production. Testing and final process, including without limitation quality assurance, reliability performance testing, and/or process qualification, may not yet be complete, and this item is subject to further changes or possible discontinuation. If available for ordering, purchases will be subject to an additional waiver at checkout, and are intended for early internal evaluation purposes only. These items are sold without warranties of any kind.

⁽³⁾ **RoHS values:** Yes, No, RoHS Exempt. See the [TI RoHS Statement](#) for additional information and value definition.

⁽⁴⁾ **Lead finish/Ball material:** Parts may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

⁽⁵⁾ **MSL rating/Peak reflow:** The moisture sensitivity level ratings and peak solder (reflow) temperatures. In the event that a part has multiple moisture sensitivity ratings, only the lowest level per JEDEC standards is shown. Refer to the shipping label for the actual reflow temperature that will be used to mount the part to the printed circuit board.

⁽⁶⁾ **Part marking:** There may be an additional marking, which relates to the logo, the lot trace code information, or the environmental category of the part.

Multiple part markings will be inside parentheses. Only one part marking contained in parentheses and separated by a "~" will appear on a part. If a line is indented then it is a continuation of the previous line and the two combined represent the entire part marking for that device.

BASED ON 0.125 THICK STENCIL
SCALE:15X

4214838/F 08/2024

NOTES: (continued)

7. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.
8. Board assembly site may have different recommendations for stencil design.

重要通知和免责声明

TI“按原样”提供技术和可靠性数据（包括数据表）、设计资源（包括参考设计）、应用或其他设计建议、网络工具、安全信息和其他资源，不保证没有瑕疵且不做任何明示或暗示的担保，包括但不限于对适销性、与某特定用途的适用性或不侵犯任何第三方知识产权的暗示担保。

这些资源可供使用 TI 产品进行设计的熟练开发人员使用。您将自行承担以下全部责任：(1) 针对您的应用选择合适的 TI 产品，(2) 设计、验证并测试您的应用，(3) 确保您的应用满足相应标准以及任何其他安全、安保法规或其他要求。

这些资源如有变更，恕不另行通知。TI 授权您仅可将这些资源用于研发本资源所述的 TI 产品的相关应用。严禁以其他方式对这些资源进行复制或展示。您无权使用任何其他 TI 知识产权或任何第三方知识产权。对于因您对这些资源的使用而对 TI 及其代表造成的任何索赔、损害、成本、损失和债务，您将全额赔偿，TI 对此概不负责。

TI 提供的产品受 [TI 销售条款](#)、[TI 通用质量指南](#) 或 [ti.com](#) 上其他适用条款或 TI 产品随附的其他适用条款的约束。TI 提供这些资源并不会扩展或以其他方式更改 TI 针对 TI 产品发布的适用的担保或担保免责声明。除非德州仪器 (TI) 明确将某产品指定为定制产品或客户特定产品，否则其产品均为按确定价格收入目录的标准通用器件。

TI 反对并拒绝您可能提出的任何其他或不同的条款。
